Assignment 1

1. Accept 2 double values from User (using Scanner). Check data type before accepting. If arguments are not doubles, supply suitable error message & terminate.
If numbers are double values accept and print its average.
Hint : Check Scanner class for the methods

3. Display food menu to user. User will select items from menu along with the quantity. (eg 1. Dosa 2. Samosa 3. Idli ... 10 . Generate Bill) Assign fixed prices to food items(hard code the prices) When user enters 'Generate Bill' option , display total bill & exit.
(No need of any class, array and no need to display the food details. Only display the total of orderd food)
